IAM PROJECT 06 | COMPLETION SHEET

Privileged Access Management & Least-Privilege Delegation | 27 October 2026

PROJECT OBJECTIVE

Separate administrative identity from domain-wide privilege; delegate and validate IT-only password resets.

LAB ENVIRONMENT

VMware ESXi | AD domain: corp.example.test | IAM-DC01 | IAM-MGMT01 | IT / Finance OUs

KEY ACCOMPLISHMENTS

- Created dedicated iam.admin01 operator identity and GG_IAM_UserOperators security role.
- Delegated IT OU password reset and force-change-at-next-logon task.
- Authorized IT test succeeded; out-of-scope Finance reset returned Access is denied.
- Confirmed Security Event 4724: iam.admin01 to pam.test01 (27 Oct 2026, 08:56:23).
- Verified no recursive membership in seven surveyed privileged groups.

FINAL STATUS | PLANNED TESTS PASSED

Authorized IT reset: PASS | Finance reset denial: PASS | Audit actor: VERIFIED

Seven privileged group checks: FALSE for iam.admin01 | Full ACL review: NOT PERFORMED

SKILLS DEMONSTRATED

Active Directory | RBAC | OU-scoped delegation | Least privilege | PowerShell | Security auditing

NEXT PROJECT | 07 — IAM SECURITY ASSESSMENT & CAPSTONE

Consolidate Projects 01–06, evaluate access controls, document findings, and prepare a portfolio report.

SCOPE AND EVIDENCE NOTES

Test evidence supports the listed access boundary; it is not a complete enterprise PAM or effective ACL assessment.

Event 4724 documents a reset attempt; the ADUC success confirmation separately supports the successful IT reset. The broader OU ACLs were not independently audited.
